EXECUTIVE SUMMARY

JEFFREY SOBEL

Chief Revenue Officer | Commercial Growth | Consumer Electronics | Technology | Go-to-Market & Revenue Strategy Leader

I am a commercial growth and revenue executive with extensive experience in technology, consumer electronics, startups, and consulting. My career has been centered on revenue generation, sales leadership, go-to-market strategy, product commercialization, market expansion, channel development, strategic partnerships, and business development. Through Jess Associates, I have advised more than 20 startup and emerging companies and contributed to approximately $100M–$150M in cumulative revenue growth through commercial strategy, market expansion, distribution development, product commercialization, and revenue-generation initiatives.

I currently serve as Chief Revenue Officer in a consulting engagement with iPowerUp New Jersey, where I lead commercial growth and revenue strategy for a technology company preparing for market launch across emerging mobility, solar, and IoT technology markets. In this role, I develop national go-to-market and sales strategies, drive market and channel development, build distribution relationships, and work with founders and senior leadership to translate business priorities into revenue initiatives, sales execution plans, and scalable commercial opportunities.

Previously, as Founder, Executive Vice President, and Lead Consultant at Jess Associates, I advised founders and executive leadership teams on commercial strategy, revenue growth, go-to-market execution, product commercialization, market expansion, channel development, and sales organization strategy. I supported emerging companies in progressing from approximately $1M–$3M in startup revenue to sustainable multi-million-dollar growth, while building specialized national sales teams of 8–10 category-focused professionals and developing retail, e-commerce, B2B, enterprise, and distributor channel strategies.

Earlier in my career, as Sales Executive at Fujitsu America, I expanded East Coast distribution channels for hard drives and printer products, generating approximately $3M–$5M in regional revenue within two years through strategic VAR and distributor partnerships. At Star Micronics, I supported the national launch of innovative 9-pin printer technology, contributing to more than $20M in company sales within three years and generating approximately 33% of total company sales through Northeast regional sales activities and channel relationships.

I began my career with Toshiba-America ISD, where I generated approximately $7M–$10M in sales during the first two years, increasing to approximately $15M–$27M by the third year through enterprise sales, corporate partnerships, strategic account development, and customer relationship expansion. I also supported the U.S. commercial launch of Toshiba computers, laptops, and 24-pin printers, helping expand customer reach, distribution, and product adoption across the Northeast commercial technology market.

I hold a Master of Science (MS) in Education from Long Island University, completed Graduate Studies in Psychology at The New School for Social Research, and pursued Doctoral Studies in Education Administration at Yeshiva University. I also hold a Bachelor of Arts (BA) from Long Island University.

I bring a hands-on, commercially focused leadership approach that combines revenue generation, go-to-market strategy, product commercialization, market expansion, channel development, strategic partnerships, and executive-level collaboration to help technology and growth-stage organizations establish market presence, expand commercial opportunities, and achieve sustainable revenue growth.

Sincerely,

Jeffery Sobel
